

Enrolyx : End-to-End Enrollment Management

Enrolyx manages the complete student enrollment lifecycle—from first inquiry to enrollment and payment—while enabling data-driven decision-making and operational efficiency.

PHASE 1 — Core Capabilities (Foundation)

These are the must-have capabilities to launch and operate the platform effectively.

1. Enrollment Cloud

- End-to-end admissions prospect management with stage tracking
 - Prospect categorization/grouping and segmentation
 - Multi-intake management (including simultaneous intakes for the same program)
 - Workflow automation and status tracking
-

2. Education CRM (Core Engine)

- Lead capture & centralization (web, campaigns, walk-ins, partners)
 - Prospect profile management & categorization
 - Automated lead assignment
 - Sales pipeline tracking
 - Marketing executive performance tracking (KPI definition & monitoring)
 - Prospect interaction tracking and history
-

3. Application Management Platform

- Custom progressing application forms
 - Document upload & validation
 - Application workflow automation
 - Multi-program / multi-campus support
 - Intake-based application handling
-

4. Payment & Finance Cloud

- Payment gateway integration
 - Online fee collection (multiple methods)
 - Automated reminders
 - Transaction tracking & reconciliation
-

5. Engagement & Communication Suite

- Omnichannel communication (Email, SMS, WhatsApp, Messenger, etc.)
 - Communication tracking across all channels
 - Query tracking system
 - Interaction summaries (marketing executive ↔ prospect)
 - AI Agent and Chatbot support for real-time engagement
-

6. Analytics & Operational Visibility

- Campaign performance tracking
 - Conversion funnel analysis and insights
 - Executive dashboards
 - Basic insights for decision-making
-

PHASE 2 — Extended Capabilities (Ecosystem & Integrations)

This phase focuses on making the platform enterprise-ready and connected.

Internal & External Integrations

- Authentication systems (SSO, LDAP, OAuth)
- Google integrations (Forms, Analytics, Ads, Calendar, etc.)
- Social platforms (Facebook lead ads, campaign sync)

- Communication platforms (WhatsApp Business API, Messenger, SMS gateways)
- Student Information Systems (SIS)
- Learning Management Systems (LMS)
- Payment gateways & financial systems
- CRM/ERP integrations (if institutions already use systems)
- Marketing automation tools

👉 Additional integrations to consider:

- Data warehouses / BI tools (Snowflake, BigQuery, Power BI)
 - Identity verification systems
 - Document verification services
 - Call center / telephony systems
 - Email marketing platforms
-

Campaign & Marketing Management

- Campaign tracking (multi-channel including Facebook)
 - ROI tracking
 - Marketing material approval workflows
 - Performance benchmarking across campaigns
-

Performance & Governance

- Marketing executive KPI configuration & tracking
 - Interaction-level performance analytics
 - Prospect feedback and review management
 - Communication audit trails
 - Workflow approvals (marketing & operational)
-

Mobility & Field Enablement

- Mobile access for marketing teams
 - Field lead capture
 - Real-time updates and tracking
-

PHASE 3 — AI & Science-Based Intelligence (Differentiation Layer)

This is where your platform becomes *truly differentiated*.

AI-Powered Intelligence Layer

1. Science-Based Prospect Intelligence

- Profile categorization using behavioral and demographic signals
 - Duplicate detection using probabilistic matching models
 - Prospect scoring & prioritization
 - Drop-off prediction
-

2. Recommendation Engine

- Science-based program recommendations
 - Best-fit intake suggestions
 - Personalized engagement strategies
-

3. Smart Communication System

- AI-generated communication templates
- Context-aware messaging (based on prospect profile & stage)
- AI-guided communication recommendations
- Personalization at scale

4. Conversation Intelligence

- Automatic summaries of interactions
 - Sentiment analysis
 - Engagement quality scoring
 - Coaching insights for marketing executives
-

5. Advanced Insights & Decision Intelligence

- Predictive analytics dashboards
 - Executive-level recommendations
 - Funnel optimization suggestions
 - Performance anomaly detection
-

Engineering & Platform Considerations (Cross-Phase)

These are **foundational principles**, not user-facing features:

- AI-native architecture (not AI as an add-on)
 - Enterprise-grade security (RBAC, encryption, masking)
 - Full auditability (data + communication + workflow audits)
 - Scalable microservices architecture
 - API-first design
 - Compliance readiness (GDPR, SOC2, etc.)
 - Observability (logs, monitoring, tracing)
-

Metadata Configuration & Management

Customers should be able to define and manage the following:

Academic & Enrollment Metadata

- Intake creation & management (multiple/simultaneous intakes)
 - Programs / Courses
 - Specializations / Streams
 - Campuses / Locations
 - Departments / Faculties
 - Program–intake mappings
 - Eligibility criteria definitions
 - Application stages & statuses
-

User & Access Management

- User creation & role assignment
 - Role-based access control (RBAC)
 - Permission configuration
 - SSO configuration (SAML, OAuth, LDAP)
 - Team / hierarchy structure (e.g., counselors, managers)
 - Territory / region assignments
-

Prospect & CRM Metadata

- Prospect profile fields (custom attributes)
 - Lead sources (web, Facebook, walk-in, partners, etc.)
 - Campaign definitions
 - Pipeline stages (customizable funnel stages)
 - Tags / labels / segmentation rules
 - Prospect categories (e.g., domestic, international, high-intent)
-

Campaign & Marketing Metadata

- Campaign types (digital, offline, events)
 - Channel definitions (Facebook, Google, email, etc.)
 - UTM parameter structures
 - Marketing material categories
 - Approval workflows for campaigns
 - Budget categories
-

Communication Metadata

- Communication channels (WhatsApp, SMS, Email, Messenger, etc.)
 - Message templates (email, SMS, WhatsApp)
 - Template categories & tagging
 - Communication triggers/events
 - SLA definitions for responses
 - Opt-in / consent preferences
-

Application & Document Metadata

- Application form fields (dynamic form builder)
 - Document types (ID, transcripts, certificates)
 - Document validation rules
 - Submission requirements per program/intake
 - Application checklists
-

Finance & Payment Metadata

- Fee structures (per program/intake)
- Payment plans (installments, EMI options)
- Payment methods

- Currency configurations
 - Refund policies
 - Discount / scholarship definitions
-

Performance & KPI Metadata

- KPI definitions for marketing executives
 - Target settings (daily, weekly, campaign-based)
 - Scoring models (lead scoring, performance scoring)
 - Review & feedback categories
-

Workflow & Automation Metadata

- Workflow definitions (admissions, approvals, marketing)
 - Automation rules (triggers & actions)
 - Task types & priorities
 - Escalation rules
 - Approval hierarchies
-

Integration Metadata

- API configuration (keys, endpoints)
 - Webhook definitions
 - Third-party integrations (Facebook, Google, SIS, LMS, etc.)
 - Data mapping configurations between systems
 - Import/export templates
-

AI & Intelligence Metadata (Advanced Layer)

- Universal knowledge base (UKB)
 - Model configuration inputs (scoring weights, rules)
 - Prospect engagement history and patterns (Eg - effort to convert)
 - Recommendation criteria
 - Duplicate detection thresholds
 - Personalization rules
 - Communication tone/style guidelines
-

Compliance & Audit Metadata

- Data retention policies
- Consent & privacy configurations
- Audit log settings
- Access logs & tracking rules
